

WITTRA™

AGRICULTURE

Agriculture continues to look towards technology to deliver actionable intelligence in its ambition of sustainability, enhanced productivity and to help minimise environmental impacts. The concept of smart farming evolved over a decade ago with earlier adopters focused on collecting environmental data with a view to improving both quality and quantity of their products while minimizing the risk and waste. The current desire is to include physical object tracking and usage data to the environmental data to ensure a 360° view of operations. Although the desire is high adoption has remained slow as the market continues to struggle to overcome implementation challenges, WITTRA offers the perfect solution.

TARGET APPLICATIONS

Soil Management

Crop Monitoring

Local/zonal temperature & humidity

Equipment monitoring & machinery preventative maintenance

Livestock Monitoring & Management Automation

TOP CHALLENGES

Poor connectivity in rural areas

Cost of implementation

Infrastructure

Ease of Deployment

Complex Environment

Total asset visibility

Security

WITTRA IOT OUT OF THE BOX

WITTRA IOT out of the box is a wireless sensor network kit with a cloud-based API that can be deployed on a site to monitor objects and assets. The ruggedized kit enables users to Connect, Sense and Locate their assets in the toughest environments and areas of weak connectivity. The use of sub-GHz frequency bands provides a long transmission range and enables the signal to penetrate dense building infrastructure. With certified hardware, the kit is secure, easy to deploy and ready for field deployment.

THE WITTRA SOLUTION TO YOUR CHALLENGES?

WITTRA offers the only solution to allow users to Connect, Sense and Locate their assets in the toughest environments or areas of weak connectivity in a single technology deployment. We accelerate and simplify IoT delivering predictable pricing and a predefined ROI.

SOLUTION OVERVIEW

Building an IoT solution with WiTTRA is child's play, simplifying complexity is a key element of the WiTTRA DNA. WiTTRA's Network Kits allow users to collect, communicate with and control their assets on day one. Our web portal simplifies device commissioning, and the network monitoring tools ensure ease of deployment; And together with our cooperation with several world-leading platform providers, WiTTRA offer the simplest way to build end customer solutions, Month becomes days. WiTTRA overcomes connectivity issues, devices run in an IP-based radio network. Using sub-GHz radio bands WiTTRA provides long-range and good penetration of structures with the option of a cellular backhaul.

- Predictive / Preventative maintenance through usage data and analytics
- Data for workflow planning /Automated equipment utilization reporting
- Heat-map generation for resource monitoring
- Reduce carbon footprint. Increased efficiencies generate cost savings
- Rugged for harsh environments
- Strong signal penetration strength
- Less hardware and lower implementation costs of deployment

KEY BENEFITS

WiTTRA will help you reduce development and operational costs.

- Quick and easy application development cycle, weeks become days
- Accurate location and orientation, multi-axis positioning down to 1 meter
- Future proof. Extend with click-on sensors and third-party sensors
- Build comprehensive, cost-efficient, and competitive solutions
- Based on open standards for quick and easy interoperability
- Easy to install, integrate, support, and maintain
- True mesh eliminates radio black spots, giving total asset visibility in all environments
- Highly secure using TPM authentication chips in all devices

- ✓ Certified
- ✓ Ruggedized IP67
- ✓ Cloud API
- ✓ Plug and Play

ABOUT WITTRA

WiTTRA Sweden AB develops innovative technologies and solutions within Internet of Things (IoT). Since its start in 2012, WiTTRA has been able to secure a substantial portfolio of intellectual property and rights linked to its innovations. The unique pre-integrated, pre-tested and pre-secure solutions allow users to collect, communicate and control their assets even in the toughest of environments.
